

“Full Stack Ruby on Rails Developer Engineer” Engineering Role

Must-haves:

- Ruby on Rails / 3+ years of experience working in production Rails applications across all layers of the stack
- Relational database (preferably PostgreSQL) experience, including understanding of database indices and performance tuning
- JavaScript or TypeScript / 1+ year of experience
- Automated testing (we use RSpec)
- Experience integrating with 3rd-party APIs

Nice-to-haves:

- Experience with [TailwindCSS](#)
- Experience with [ViewComponent](#)
- Experience with [Stimulus](#)

Well-qualified candidates will have excellent knowledge of test-driven development, domain-driven development, design patterns, debugging both Ruby and JavaScript, and domain modeling / application architecture.

Interest in participating in customer interviews, scoping and prioritization of work, and improving team development practices is a plus.
