# GoLang Dev Job Description

## Summary

The rise of cybersecurity threats like phishing and ransomware have made BCDR solutions more important than ever to safeguard data and keep companies secure and productive.  MSPs rely on the client to address these complex challenges with BCDR solutions that are simple, comprehensive, and profitable.

We are looking for a GoLang Developer to join our engineering team and help us develop and maintain our software products. In this role, you will be a part of a global team that works to develop and support the best possible product for our clients.

## Key Responsibilities

- Writing and testing back-end code.
- Work semi-independently and solve complex problems.
- Writing high-load/scalable services.
- Supporting applications in production
- Experience using server-side logic

## Experience, Skills, and Competencies

- Golang experience of 2+ years
- Overall development experience 5+ years.
- Team spirit
- Good problem-solving skills
- BSc in Computer Science, Engineering or relevant field is a plus
- Good English language skills
